

# Java Software Engineer

## Function Description

Aprico is looking for an experienced Java J2EE software Engineer to extend its Java J2EE Team. Our new colleague will be responsible for J2EE application development.

## Responsibilities

As a Java Software Engineer, you will be responsible for component development, using Object Oriented technologies. You will assist in the development of applications:

- Graphical User Interface (Swing, SWT, Java Applets)
- Database Access (JDBC, JNDI)
- Web (JSP, Servlets, Struts, JSF)
- Business (Javabeans, EJB's)
- Interfacing with EIS (JAX-RPC, JAX-WS, JMS, JavaMail, JDBC, RMI/IIOP, Connector Architecture)

You will also assist in application design

- UML diagrams;
- Improving application scalability, performance, reliability and security;
- Define development / system integration;
- Component and application deployment:

## Communication Skills

We are looking for a professional with good communication skills and the ability to interact with analysts to understand the specifications and designs that underlie applications.

Proficient skills in Dutch (spoken), French (spoken), and English (spoken and written) are expected.

## Personal Skills

As a consultant, the candidate should be able to work independently and follow project priorities and deadlines. He/she closely follows project procedures (check-in, check-out, time sheet reporting and punctuality), and will adhere to the rules, standards and guidelines defined in the architecture.
